

JB Warranties Extended Labor Coverage

What does the extended warranty cover?

JB Warranties labor agreement is a Fix on Fail warranty that covers the labor on all mechanical and electrical failures of the equipment and its interior components.

Coverage listed below includes but is not limited to:

Condenser - fan blade, fan motor, coil, high pressure switch, low pressure switch, dryer, compressor, contactor, capacitor, expansion valve etc.

Furnace or Air Handler - blower, blower chamber, blower motor, control board, flame sensor, pilot, electric or hot surface ignitor, gas control valve, coil etc.

Thermostat - labor change out of a failed thermostat, does NOT cover the thermostat part or product replacement cost.

Additional coverages on equipment - expansion valve, check valve, reversing valve, service valve, metering device, inverter board, EEV stepper etc.

All systems must have an annual maintenance performed. This is a separate contract between the agreement holder and contractor. JB Warranties claims do not cover maintenance or what is considered a maintenance issue; filter changeouts, battery replacement, line blowouts, rusted drain pans etc.

JB Warranties labor covers the major piece of equipment listed on the agreement along with all of its interior components. Exterior components of the equipment would not be covered. Including but not limited to exhaust, disconnect, exterior refrigerant lines, leak tests and drain lines.

❖ Please refer to agreement terms and conditions for full coverage details.
